

Barrel Clamps

Barrel Clamps - A Barrel Clamp is actually a hydraulic or mechanical attachment designed for a lift truck. It can be utilized in order to compress the object you would like to transfer using the forklift and is usually used for handling kegs, paper rolls and barrels. Several designs of barrel clamp accessories even have a revolving function. For example, the revolving function allows the person operating the forklift to be able to slot in a vertically stored paper into the horizontal intake of a printing press.
